

Sum:-

Problem Definition:-

Sum 2 Class:

located in com.rohi.funcs package.

Uses scanner for input

Sum 2 Method:

Prompts user for two integers.

Read and sums the integers

Return the sum.

Sum 3 Method:

takes two integer parameters.

Computes and returns their sum.

Main Method:

calls sum 3 and 14 and 16

Prints the result:

Algorithm:-

1. Start.

2. Import the Scanner.

3. Define sum 2 method:

- * ~~Take~~ the input from the Scanner

- * Store it in n_1 & n_2

- * Calculate $sum = n_1 + n_2$

- * Return Sum.

4. Define Sum 3 Method:

- * Accept two integers a and b

- * Calculate $sum = a + b$.

- * Return Sum.

5. Define Main Method:

- * Call $sum\ 3(14, 16)$ store in ans .

- * Print ans .

6. End.
