

String :

Definition :

This Program takes the users name as input and generates a personalized greeting message. It demonstrates how to use methods to return strings and how to pass arguments among them.

Algorithm:-

1. Start.
2. Define the `String` class in the `com.rohit.tunes` package.
3. Import the `java.util.Scanner` class.
4. Define the `main` method.
 - * Create a `Scanner` object in.

- * Print "enter your name".

- * Read input name.

- * call mygreet and store result in Personalized.

5. Define the mygreet method:

- * Concatenate "hello" with name.

- * Return the concatenated String.

6. End.
